Profile

An Entrepreneurial AI Engineer who builds and ships end-to-end products. I take complex business challenges from concept to reality, specializing in Gen AI powered applications and agentic workflows. I thrive in fast-paced environments, owning the entire product lifecycle from technical architecture to market deployment.

What makes my approach unique: is the combination of hands-on technical leadership with a strong product and entrepreneurial mindset. I don't just build software; I build businesses. I thrive on leading teams, engineering scalable backend systems, and owning the product lifecycle from initial concept to market deployment and even acquisition.

EMPLOYMENT

Dynamic Leo Information Technology LLC,

AI/ML Engineer & Team Lead 🔗

08/2024 – Present

Islamabad,

Pakistan (Onsite)

- Founding team member and first engineering hire, contributing to initial company setup and technical direction.
- Led a strategic partnership with Sharjah Research Technology and Innovation Park (SRTIP), managing a team to successfully deliver over 200+ web development projects for SRTIP clients within 7 months.
- Developed a proof-of-concept computer vision-based drowsiness detection AI hardware device utilizing Raspberry Pi 5 and Coral AI HAT (neural accelerator).
- Engineered backend microservices using GraphQL for a Shopify drop shipping platform, deployed on cloud infrastructure.
- Provided oversight for mobile application development initiatives within the company.

Dotweb Agency, Lead AI Product Engineer 🔗

02/2024 – 05/2025

Wyoming, US

(Remote)

- Served as Lead Product Engineer for ImmoIQ, an AI-driven SaaS platform automating leads and customer service for Swiss real estate agents.
- Developed and maintained large-scale industrial web scrapers collecting real estate data (>800K listings daily) across the DACH region (Germany, Austria, Switzerland).
- Built & trained ML models for real estate price prediction using the extensive scraped dataset.
- Implemented LLM-powered chatbots (Langchain, LlamaIndex, Qdrant, various models) performing customer service, legal advisory tasks, and lead capture via agentic workflows.
- Created automated tools for generating standardized real estate documents, improving realtor efficiency.

Reroute Services, AI Product Developer

09/2023 – 02/2024

Cardiff, Wales

(Remote)

- Developed generative AI-based automation software for automated lead capture and prospect engagement.
- Built and deployed an AI Sales Representative chatbot for businesses using WhatsApp API and Twilio integration.
- Created an AI Sales Rep website chatbot incorporating a real-time product recommendation engine.

EDUCATION

BS in Computer Science, Institute of Space Technology ⓘ

09/2020 – 07/2024

Islamabad, Pakistan

• **Final Year Project: Synthium AI** is a SaaS platform that leverages Generative Adversarial Networks (GANs) to create high-quality synthetic tabular data, addressing critical challenges of data scarcity and privacy concerns in AI development. Tech stack: Python, FastAPI, Gretel-Synthetics, Synthetic Data Vault (SDV), PyTorch, Pandas, NumPy, Matplotlib, Scikit-Learn, Uvicorn, SQLAlchemy, PyMySQL, Google Drive API.

Publications

Leveraging GANs for synthetic tabular data generation: a platform-centric solution to data scarcity, *26th Irish Machine Vision and Image Processing Conference (IMVIP 2024)* ⓘ

25/09/2024

In this publication, we introduce Synthium AI, a comprehensive, platform-centric solution to the problem of data scarcity in machine learning. The paper details a system that leverages Generative Adversarial Networks (specifically CTGAN and DGAN) to produce high-fidelity synthetic tabular and time-series data. The research showcases a modular architecture and an automated workflow that simplifies the data generation process, making advanced AI techniques more accessible to researchers and organizations.

ⓘ

PROJECTS

Markhorverse, *Founder & Technical Lead* ⓘ

08/2023 – Present

Islamabad, Pakistan (Hybrid)

• Co-founded an early-stage venture providing Web Development & AI/ML Automation solutions, managing remote collaboration.

• Developed proof-of-concept AI solutions and web applications for initial small-scale clients.

• I gained foundational experience in client requirements gathering, proposal writing, and project delivery in a startup context.

• Developed Web Whisperer, a SaaS based platform for developing AI Chatbots for websites. Most accurate knowledgebase extraction while generating each chatbot in maximum 5 minutes. The product was later annexed and acquired by ImmolQ. LinkedIn: [linkedin.com/company/webwhispererai](https://www.linkedin.com/company/webwhispererai).

• Developed an AI-Based Prompt to Video Generator. Users would only need to enter a prompt, and the AI will create the relevant scenes and scripts for the AI to compile it into a shortform engaging content. Demo results: [youtube.com/@CyberamsMedia/shorts](https://www.youtube.com/@CyberamsMedia/shorts) ⓘ.

SKILLS

AI/ML	Programming & Backend	Tools & Platforms
Large Language Models (LLMs - OpenAI, Anthropic, Google), Agentic Workflows, Langchain, LlamaIndex, Vector Databases (Qdrant), Machine Learning (Predictive Modeling, Scikit-learn), Computer Vision (OpenCV, Object Detection), Industrial Data Scraping & Processing, Generative AI Applications	Python, GraphQL, Microservices Architecture, REST APIs	Git, Docker, Cloud Environments (AWS, GCP, Azure)
Databases SQL/NoSQL databases, PostgreSQL, MongoDB)	Others Team Leadership, Project Management, Client Communication & Management, Agile Methodologies, SCRUM, Product Development Lifecycle, SaaS Product Development
